Project: Science into Art- Manipulated Digital Radiography

Banana

shell

Crab

Digital Radiography (X-Ray) explodes the usual, the “normal” representations. Radiography is more than a technique- it is the only possible ‘means’ to read reality, through matter rather than light. A blueprint.

Genetically Modified Objects Series

Artist Statement - *“The concern about the environment, the massive technological changes, and human interference with nature -are all subjects that are on my mind. This artwork is my artistic vision interpreting natural objects and environmental changes that are happening (and being created) in our world today. These changes can have both positive and negative results. I am presenting new views- both beautiful and curious- of common objects.”*
